A; Title: The genome sequence of the facultative intracellular pathogen Brucella melitens

A; Reference number: AD3252; PMID:11756688

A; Residues: preliminary

A; Molecule type: DNA

A; Residues: 1-728 *kUR>

A; Cross-references: GB:AE008917; PIDN:AAL51561.1; PID:g17982281; GSPDB:GN00190

A; Experimental source: strain 16M

C; Genetics:

A; Gene: BME10380

A; Map position: I

C; Keywords: carbon-carbon lyase; coenzyme A; oxo-acid-lyase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ä

S51788

Malate synthase (EC 4.1.3.2) isoenzyme G - Escherichia coli (strain K-12)
C;Species: Escherichia coli
C;Date: 23-Aug-1995 #sequence_revision 13-Mar-1997 #text_change 01-Mar-2002
C;Accession: 551789; F65083
C;Accession: 1.; Pellicer, M.T.; Badia, J.; Aguilar, J.; Baldoma, L.
Eur. J. Biochem. 224, 541-548, 1994
A;Title: Molecular characterization of Escherichia coli malate synthase G.
                                                                                                                                                                                     WHRRRVIEPIDWDAYROFLTEIGYLLPEPDDFTITTSGVDAEITTTAGPQLVVPVLNARF

Mesorhizobium loti.";
DNA Res. 7:331-338(2000).
-:- CATALYIIC ACTIVITY: Acetyl-CoA + H(2)O + glyoxylate = S-malate +
                                                                                                                                                                                                                                                                                                                                                                                            -!- PATHWAY: Glyoxylate bypass; second step.
-!- SUBUNIT: Monomer (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the malate synthase family. GlcB subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           LNARFALNAANARWGSLYDALYGTDVIPETDGAEKGPTYNKVRGDKVIAYARKFLDDSVP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   -!- ENZYME REGULATION: Inhibited by oxalate, glycolate and ATP.
-!- PATHMAY: Glyoxylate bypass; second step.
-!- SUBUNIT: Monomer.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to the malate synthase family. GlcB subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 TDRVSVGNLRIARVLYDFVNNEALPGTDIDPDSFWAGVDKVVADLTPQNQALLNARDELQ
